INFLUENZA WEEKLY UPDATE

Summary
Influenza in the population is estimated using the number of GP consultations for flu-like illnesses. For 2006 this started on May 1. Current levels are low.

The health districts with the highest rate last week were Waikato and Eastern Bay of Plenty. 57% of the cases this week were in adults aged between 20 and 64 years and 26% were in children aged 5-19 years.

So far this year over 96% of the laboratory tested cases were influenza A with a small number of influenza B cases.

*Note: This was published in New Zealand Public Health Report 2001, 8(1):9-12."Influenza surveillance and immunisation in New Zealand, 1990-1999"

In the past week, a total of 207 consultations for influenza-like illness were reported from 86 general practices in 23 out of 24 health districts. This gives a weekly consultation rate of 53.4 per 100 000 patient population.

Figure 1 compares the consultation rates for influenza-like illness for each health district over the past week. Waikato had the highest consultation rate (215.1 per 100 000), followed by Eastern Bay of Plenty (146.3 per 100 000).
Forty-six swabs were sent from the sentinel surveillance in the past week. Fifty-four swabs were received by virology laboratories. Of these, 13 influenza viruses were isolated, nine as influenza A (yet to be sub-typed) and four as A/New York/55/2004 (H3N2) - like. The distribution by health district is shown in Table 1.

In addition, 29 influenza viruses were reported this week from the laboratory-based (non-sentinel) surveillance. Twenty-eight were identified as influenza A (yet to be sub-typed) and one as A/New York/55/2004 (H3N2) - like. The distribution by health district is shown in Table 2.

Figure 2 shows the cumulative total of influenza isolates confirmed (sentinel and laboratory-based surveillance) to the end of week 25, 25 June 2006. A total of 87 influenza viruses were identified, 52 as influenza A (yet to be sub-typed), 30 as A/New York/55/2004 (H3N2) - like, two as A/California/7/2004-like, two as B/Shanghai/361/2002-like, and one as influenza B (yet to be antigenically typed).
