

# INFLUENZA WEEKLY UPDATE

2007/26: 25 – 29 June 2007

In the past week, a total of 146 consultations for influenza-like illness were reported from 80 general practices in 22 out of 24 health districts. This gives a weekly consultation rate of 43.5 per 100 000 patient population.

Figure one compares the consultation rates for influenza-like illness for each health district over the past week. Hawke's Bay had the highest consultation rate (162.0 per 100 000), followed by Wairarapa (154.3 per 100 000).

*Figure 1. Weekly consultation rates for influenza-like illness by health district week ending 29 June 2007*

\*Health districts not participating in the influenza surveillance

Forty-six swabs were sent from the sentinel surveillance in the past week. Fifty-one swabs were received by virology laboratories. Of these, 12 influenza viruses were isolated, nine as influenza A (yet to be sub-typed), two as A/New Caledonia/20/99 (H1N1) – like, and one as B/Shanghai/361/2002 – like. The distribution by health district is shown in Table 1.

**Table 1.**

Antigenic Strain	NW	CA	WK	Total
A	0	5	4	9
A/New Caledonia/20/99 (H1N1) - like	1	1	0	2
B/Shanghai/361/2002 - like	0	1	0	1
<b>Total</b>	<b>1</b>	<b>7</b>	<b>4</b>	<b>12</b>

In addition, 17 influenza viruses were reported this week from the laboratory-based (non-sentinel) surveillance. Sixteen were identified as influenza A (yet to be sub-typed) and one as A/New Caledonia/20/99 (H1N1) – like. The distribution by health district is shown in Table 2.

**Table 2.**

Antigenic Strain	NW	CA	WK	GS	HB	Total
A	2	0	11	1	2	16
A/New Caledonia/20/99 (H1N1) - like	0	1	0	0	0	1
<b>Total</b>	<b>2</b>	<b>1</b>	<b>11</b>	<b>1</b>	<b>2</b>	<b>17</b>

Figure 2 shows the cumulative total of influenza isolates confirmed (sentinel and laboratory-based surveillance) to the end of week 26, 29 June 2007. A total of 54 influenza viruses were identified, 42 as influenza A (yet to be sub-typed), seven as A/New Caledonia/20/99 (H1N1) – like, two as B/Malaysia/2506/2004-like, two as B/Shanghai/361/2002-like, and one as influenza B (yet to be typed).

*Figure 2: Cumulative laboratory-confirmed isolates by health district to 29 June 2007*

Figure 3 shows the weekly national consultation rates for 2005 and 2006 seasons, and 2007 so far. The current rate of influenza is lower than at the same time last year.
